

autoLock AV3

Automatic multi-point locking systems

Security. Tight seal. Convenience.

Everything expected of a door locking system.

Securely closing doors, convenience and a tight seal – precisely the features which you can expect from Winkhaus' automatic multi-point locking system. The locking system comes in the mechanical autoLock AV3 version.

Its innovative sealing elements and practical daytime latch can be adapted to meet your individual requirements. Fully automatic – in the truest sense of the word.

AV3 – cutting-edge door technology

Extremely secure: The Winkhaus automatic multi-point locking system locks automatically when you pull the door closed without you having to lock the door with a key.

Extremely convenient: If you want to temporarily release the lock, for example to carry in the shopping, you can simply enable the convenient TaFa daytime latch and can open the door from the outside without a key.

Extremely tight: no unwanted drafts, no premature warping of the door. The durable sealing elements promise ultimate resistance and stability.

Door locking systems from Winkhaus are often closed – but always open to innovations

From the very beginning, since 1854, Winkhaus has nurtured a pioneering spirit. In the 1980s, this led to the company developing the revolutionary hook shape which is still going strong today. Steel-hardened fitting technologies then followed promising maximum burglary resistance, energy effciency, and user convenience. The modular product features meet a variety of different requirements and what is not yet available today will certainly be developed by Winkhaus in the future.

Secure benefits

All important aspects at a glance

The dual hook

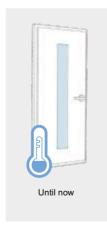

The effective automatic multi-point locking system has retained its solid hook, which throws automatically when the door is closed, ensuring complete claw engagement, and is also secured against being pushed back. This means the door is securely locked when pulled closed, rending break-in difficult. Combined with the weatherseal hook, this means the door sash is held firmly in its position providing protection against weather influences.

Improved weather performance

"There's a draft" is a phrase which you will rarely hear from users of the autoLock AV3 locking systems.

Thanks to the dynamic contact pressure of the sealing element, doors stay flush and seal-tight for many years. The door retains its smooth operation and can be unlocked with very little effort. A tighter seal with minimum effort? That sounds very much like Winkhaus.

autoLock AV3

Sturdy hook for maximum protection

Thanks to the 3-point autoLock AV3 locking system, the door will automatically lock behind you when closed, ensuring a secure and tightly sealed door. Fitted with solid and sturdy hooks, which move into the locked position without any added pressure or turning of a key, you can be assured that the door is always securely locked when you leave the house.

Door opened: Sealing element and hook

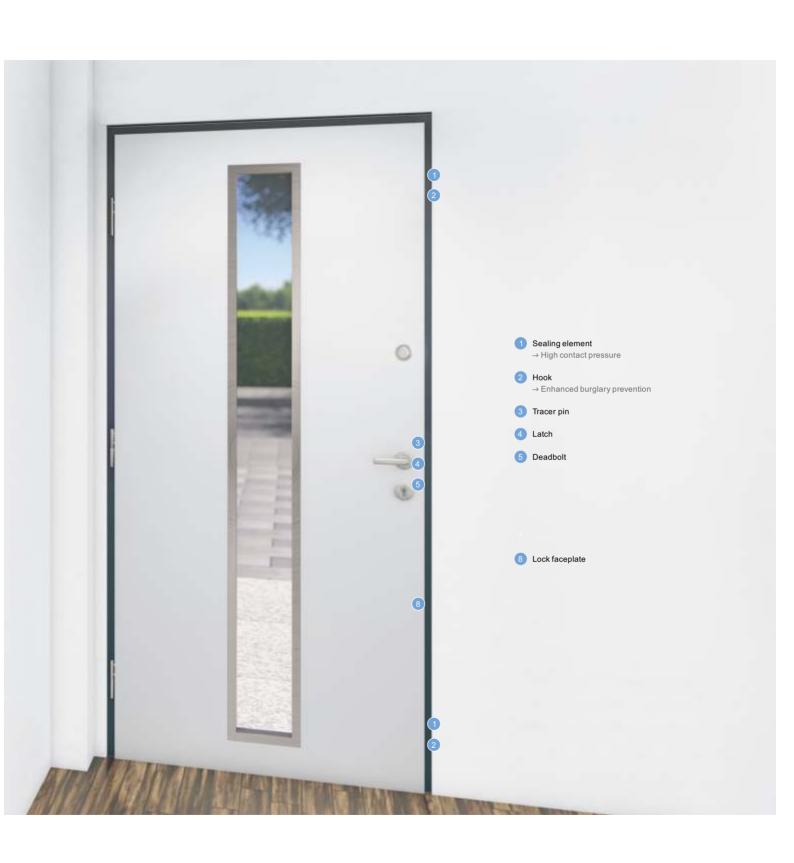

Door closed: Sealing element activated, hook extends

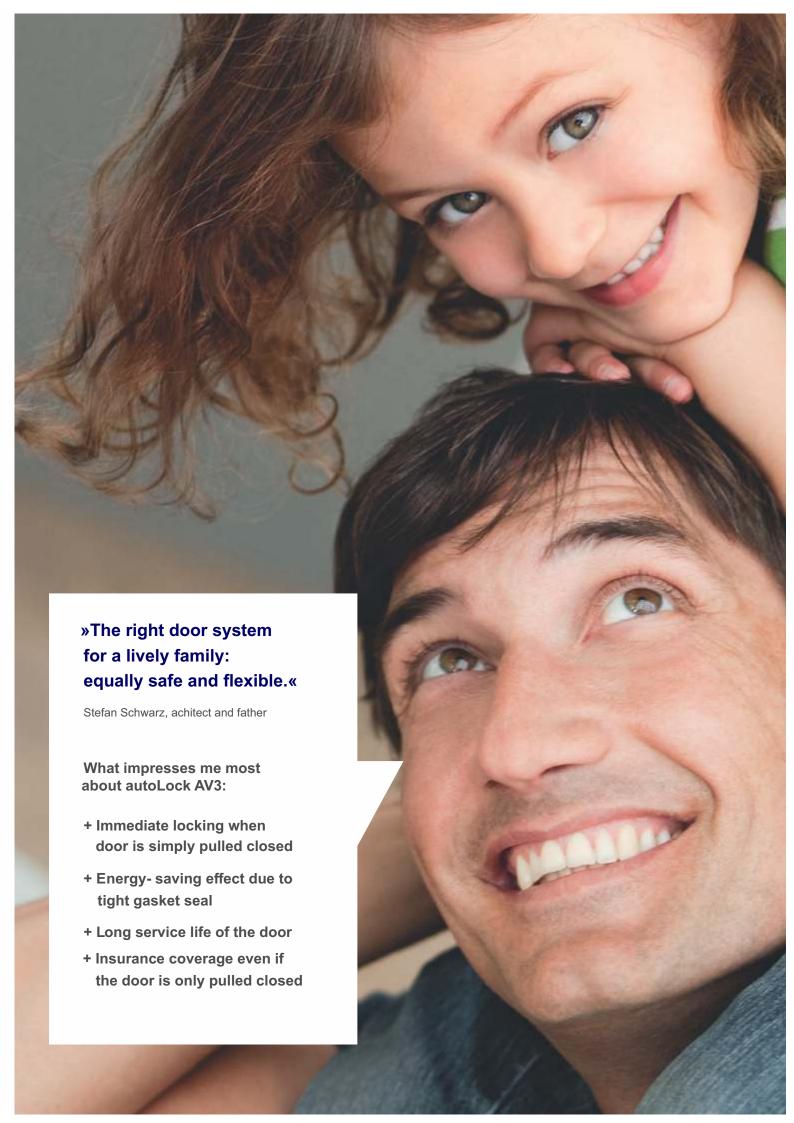

... and engages deep into the keep rail.

Winkhaus Plus

- + Automatic locking once the door is closed providing instant security
- + Dual hook for added security and dynamic contact pressure
- + Smooth operation despite the tight seal.
- + Fail-safe function prevents the hooks from accidentally disengaging
- + Protective surface coating in excess of EN1670:2007 Grade 4
- + 3-point locking system is Police Secured By Design
